

RIC's aviation team provides planning, permitting, design, and construction administration services to public and private aviation clients. RIC can help navigate the numerous regulatory, permitting, and approval processes unique to the aviation industry. Along with offering airport management support services, we provide a full range of services including site/civil engineering, surveying, landscape architecture for airport and building infrastructure improvements, both airside and landside.

A primary focus of our team is to provide airport sponsors and other aviation clients with practical real-world aviation experience. It is this real-world experience that allows our airport planners, surveyors, and engineers to focus on providing the true needs of our clients. By providing this approach of service, this assures our clients that their desired outcome is always our top priority.
